

PROFESSIONAL SUMMARY

Data Science and ML-focused Computer Science undergraduate with hands-on experience building end-to-end machine learning pipelines, performing exploratory data analysis (EDA), and deploying production-ready REST APIs. Proficient in Python, SQL, Pandas, NumPy, XGBoost, and SHAP-based model explainability. Seeking a Data Analyst or ML Intern role to contribute to data-driven decision-making and AI-powered products.

EDUCATION

B.Tech in Computer Science — K.R. Mangalam University, Gurugram Expected June 2027

CGPA: 6.0 / 10 Azure AI-900: 916 / 1000 · Strong applied ML & project track record

TECHNICAL SKILLS

Languages: Python, SQL, C++, Java, JavaScript
Data & ML: Pandas, NumPy, Scikit-learn, XGBoost, SHAP, Feature Engineering, EDA, Model Deployment
Visualisation: Matplotlib, Seaborn, Plotly (basic Tableau)
Backend / APIs: Flask, FastAPI, Node.js, Express.js, RESTful APIs
Frontend: React.js, Tailwind CSS, HTML/CSS, Vanilla JavaScript
Databases: SQL (SQLite, MySQL), MongoDB, NoSQL
Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code

PROJECTS

AI Customer Churn Prediction System — Full-Stack ML Application
Python · Pandas · NumPy · XGBoost · SHAP · Scikit-learn · Flask · REST API · Feature Engineering

- Performed end-to-end EDA and feature engineering on a Telco dataset of 7,000+ customer records, identifying 12 key churn indicators.
- Built a Scikit-learn ML pipeline (ColumnTransformer + XGBoost) with class imbalance handling, achieving ~82% ROC-AUC on held-out test data.
- Implemented SHAP TreeExplainer for per-customer model explainability, translating ML outputs into actionable business insights.
- Developed a Flask REST API serving real-time churn predictions; integrated Anthropic API to auto-generate personalised retention emails grounded in SHAP feature outputs.
- Documented business impact assumptions and model limitations — demonstrating production-aware ML thinking.

Blockchain-Based Online Voting System with Face Recognition
Python · Flask · Blockchain · Face Recognition · SQL · HTML/CSS/JS

- Designed and deployed an end-to-end secure voting system serving 100+ test users with zero data integrity failures during testing.
- Implemented face recognition authentication reducing unauthorised access attempts to 0% in QA testing.
- Built immutable blockchain vote storage and a real-time analytics dashboard for live vote monitoring.

EXPERIENCE

Web Development Intern (Remote) — Code Alpha Apr 2025 – Jun 2025

- Developed and shipped 5+ responsive web interfaces using HTML, CSS, and JavaScript, improving cross-device usability.
- Integrated 3 REST APIs into frontend features and maintained Git-based collaborative workflows across the team.
- Identified and resolved 10+ frontend-backend integration bugs in a production-like environment, cutting QA cycle time.

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Azure AI Fundamentals (AI-900) — Score: 916 / 1000 (top percentile)
- AI Foundations — IBM
- Responsive Web Design — freeCodeCamp
- Google Analytics — Google
- Volunteer, AI Summit — Bharat Mandapam, New Delhi
- Hackathon participant — rapid prototyping and cross-functional team problem solving
- Student Volunteer — Lions Clubs International
